

<p>CERTIFIED BY LIAF CONTROL S.R.L.</p>		<p>PRIVATE PROTOCOL</p>	
<p><b>ATTRIBUTE:</b> Argentine Grain Fed Beef</p>			

#### ATTRIBUTE SPECIFICATIONS:

- **Feedlot Membership:** The Fattening Establishment (Feedlot) is a registered member of the Argentine Feedlot Chamber (*Cámara Argentina de Feedlot*).
- **Feeding Options / Variations:**
  - **a)** At least 130 days on feed (grain-fed) prior to slaughter, with a high-energy diet. Metabolizable Energy (ME) must be greater than or equal to 12.26 MJ/kg of dry matter (equivalent to 2,928 MCal/kg of dry matter).
  - **b)** At least 150 days on feed (grain-fed) prior to slaughter, with a high-energy diet. Metabolizable Energy (ME) must be greater than or equal to 12.26 MJ/kg of dry matter (equivalent to 2,928 MCal/kg of dry matter).
  - **c)** At least 180 days on feed (grain-fed) prior to slaughter, with a high-energy diet. Metabolizable Energy (ME) must be greater than or equal to 12.26 MJ/kg of dry matter (equivalent to 2,928 MCal/kg of dry matter).
  - **d)** At least 200 days on feed (grain-fed) prior to slaughter, with a high-energy diet. Metabolizable Energy (ME) must be greater than or equal to 12.26 MJ/kg of dry matter (equivalent to 2,928 MCal/kg of dry matter).
- **Age at Slaughter:** Up to 6 permanent incisors (6 teeth / 6D).
- **Approved Breeds:** British breeds (Angus, Hereford, and Shorthorn) and their Zebu crosses up to 1/4 (hump not exceeding 50 mm), as well as Continental crosses (Limangus).
- **Exclusions:** Animals with typical dairy breed conformation or high Zebu influence (characterized by long and drooping ears, prominent hump, pendulous sheath, and brindle phenotype) are not accepted.
- **Specialty Breeds:** Wagyu and its crossbreeds with Angus.
